Making a Slideshow to Export

Making a slideshow is an easy way to turn the photos you have in iPhoto into a beautiful movie with music, visual effects transitions that you can then post on your website or send to someone. While it's easy to hit the SLIDESHOW button at the bottom of the iPhoto window, let's make something more customized that we can share with others!

Here's How:

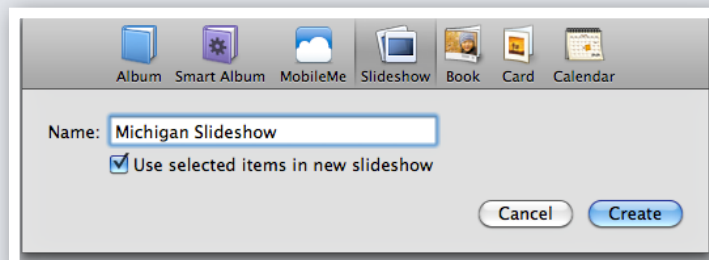

- 1. Select an Event or an Album that you want to convert into a movie.**

Creating and selecting an Album allows you to arrange the photos into the order you prefer.

- 2. Click on the + button at the lower left side of the iPhoto window.**

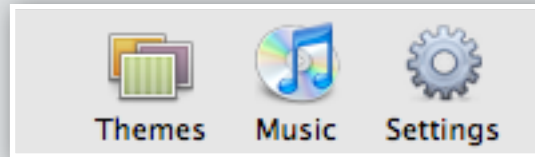

- 3. Select Slideshow from your choices at the top, and name your movie. Click CREATE.**

4. From here, you can re-organize your photos the way you want.

You can also create a blank Slideshow and drag photos from any Event or Album.

5. Click the Settings button at the bottom of the window.

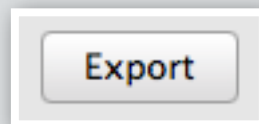

6. In the Slideshow Settings window, use the tabs at the top to select your choices for either all the slides in your show or individual slides.

You can make choices for music, theme, style and timing.

7. If you would like to put text on your photo, to show up while the slideshow plays, check the box next to *Show Caption:* and select one of the choices.

Then rename the title or put a description on the photos.

8. Once you have the slideshow the way you want it, select the Export button at the bottom of the window.

9. Choose your size based on how you will view it, and select EXPORT.

Enjoy!
